ICS Technical Information

Files

Cuts (Coarseness)

Bastard Cut is a coarse cut for filing steels and castings.

Second Cut is a medium cut for filing hard metals.

Smooth Cut is a fine cut for filing hard metals and for finishing.

Cabinet Rasp Second Cut is a finer rasp cut for filing wood.

Wood Rasp Second Cut is a very coarse rasp cut for filing wood.

Styles

Mill or Saw Files are used for sharpening and dressing edge tools.

Machinists Files are used where metal must be removed rapidly.

Curved Tooth Files are used for auto body repair and sheet metal work.

Swiss Pattern Files are used for fine finish work.

Rasps are used for filing soft metals, wood, and plastics.

Cuts (Teeth)

Single Cut is a file tooth arrangement where a series of parallel teeth run diagonally across the width of the file. It is used for sharpening saws and for finishing work.

Double Cut is a file tooth arrangement formed by two series of parallel teeth running diagonally across the width of the file with one series crossing over the other. It is used for fast stock removal.

Rasp Cut is a file tooth arrangement where a series of individual raised round teeth are formed by a single pointed punch tool. It is used for fast and rough cutting of wood, leather, hooves, and soft metals.

Curved Cut is a file tooth arrangement where a series of teeth are mill cut in curved contours across the width of the file. It is used for filing soft metals, plastics and where chip removal is required.

CURVED CUT

As illustrated above, file lengths do not include the tang. Needle file lengths do represent the overall length.

THE FILE MANUFACTURING PROCESS

1) Steel cut to size.

2) Steel is heated to forge point.

3) Steel heated to forge tang.

4) Formed file blank annealed in furnace.

5) File blank is now straightened.

6) Edges and sides are ground.

7) Point edge cut.

8) Edges cut and burs on sides are "stripped".

9) Teeth are formed by striking with chisel.

10) Teeth are either single cut or double cut.

11) Files are straightened, cut to size and marked.

12) Files are hardened and finished.

MACHINISTS' (AMERICAN PATTERN) FILES

ICS

WIS

SPECIAL PURPOSE

CHISEL CUT

ALUMINUM (FLAT) FILES

Aluminum Flat Files are designed with a special tooth construction for filing aluminum and other soft metals with a minimum of clogging. They are double cut and tapered in width and thickness.

LENGTH x WIDTH x THICKNESS	CUT	ITEM NO.		ITEM NO.		STD. PKG.	WEIGHT PER DOZ. (lbs.)
		BLACK TANG	PRICE EACH	FILE WITH HANDLE	PRICE EACH		
8 x 25/32 x 7/32		F-AF-08	9.52	FH-AF-08	10.88	12	3.7
10 x 31/32 x 1/4	Special	F-AF-10	12.68	FH-AF-10	14.04	12	7.2
12 x 1-5/32 x 9/32	Double	F-AF-12	16.18	FH-AF-12	17.64	12	11.2

ALUMINUM (HALF ROUND) FILES

Aluminum Half Round Files are designed with a special tooth construction for filing both flat and curved surfaces in aluminum and other soft metals. They are double cut and tapered in width and thickness.

LENGTH x WIDTH x THICKNESS	CUT	ITEM NO.		ITEM NO.		STD. PKG.	WEIGHT PER DOZ. (lbs.)
		BLACK TANG	PRICE EACH	FILE WITH HANDLE	PRICE EACH		
8 x 3/4 x 7/32		F-AHR-08	13.58	FH-AHR-08	14.92	12	3.3

LONG ANGLE LATHE FILES

BLACK TANG

BLACK OXIDE FINISH

WITH HANDLE

Long Angle Lathe Files are designed for filing work that is rotating in a lathe and for bench filing of aluminum and copper alloys. The long bastard cut tooth angle is self clearing when used at right angles to work. It cuts clean and does not drag or tear. Both edges are safe (uncut) to protect shoulders of work which are not to be filed. This file tapers slightly in width toward the point.

LENGTH x WIDTH x THICKNESS	CUT	ITEM NO.		ITEM NO.		ITEM NO.		WEIGHT

CARBON STEEL

INTERNAL RETHREADING TOOL SETS

ICS USA

SPECIAL PURPOSE

MILLED THREAD

SINGLE HANDLE

TWO HANDLES

Internal Rethreading Tool Sets are available with either single handles or two handles. The two handle set can be used to clean and rethread all internal threads from 3/4" to 6" ID capacity and the single handle works with any size internal thread over 3/4" ID. Both tools will rethread right hand, left hand, straight and taper threads. Two handle style automatically lines up with threads and can be locked into place. The rethreaded fit is like new with no undercut. Dies are interchangeable and can be replaced when worn. These are also known as Hand Chasers.

DIE SINKERS' (SWISS PATTERN) RIFFLERS

ICS USA

SPECIAL PURPOSE

CHISEL CUT

Die Sinkers' Riffilers are specially designed for die sinkers for getting into crevices, corners, and contours of dies and molds. They are also used by jewelers and instrument manufacturers. Riffilers have a cutting surface on each end with a safe (uncut) middle section for handling and are available in many different cross-sectional shapes.

SILVERSMITHS' (SWISS PATTERN) RIFFLERS

ICS USA

SPECIAL PURPOSE

CHISEL CUT

Silversmiths' Riffilers are specially designed for making glass molding dies. They are longer than Die Sinkers' Riffilers and have wider cutting ends with a safe (uncut) middle section for handling. Many different cross-sectional shapes are available.

SOLID CARBIDE NF BURS

ICS USA

SPECIAL PURPOSE

CNC GROUND

Solid Carbide NF Burs are designed with a milling cutter relief style of flute grind for fast stock removal and easy chip flow with minimum loading. For use on non-ferrous metals, aluminum, reinforced plastics, and other soft, sticky materials.

Zirconium Nitride Coated Solid Carbide NF Burs are the ideal choice for maximizing bur life in long production runs, especially aluminum. As an investment, they cost about 14% more, and produce an average 300% improvement over uncoated tools when machining above materials.
