

HIGH SPEED STEEL

EXTRA LENGTH TAPER SHANK OIL HOLE DRILLS

Perfect Point® Extra Long Taper Shank Oil Hole Drills are designed for deep hole drilling and where heavy feed conditions are required. Coolant flow virtually eliminates chip packing and other problems common to deep hole drilling applications. The Perfect Point® was specifically designed for high production work in steel drilling machines and will drill twice as many holes as cobalt oil hole drills. Up to 1500 drilled holes per drill is not uncommon.

Fractional Sizes (Taper Shank) 31/64" To 1-1/4" Dia.

COOLANT INDUCOR SOCKET

For Adapting Taper Shank Oil Hole Drills To Morse Taper Coolant Fed Adapters. Oil is fed through the side of shank via internal oil holes within adapter. Adapter is designed with a slip ring to which the oil line can be connected when drill is rotating. NOTE: When side shank feed is used, set screw must remain in end of tang to block off tang end oil feed hole. To use tang end feed, simply remove set screw and insert into end feed holder. Side shank feed hole does not need to be blocked when using tang end feed.
